Professional Summary

Software Developer focused on backend engineering and business process optimization. Specialized in the implementation of ERP systems (Openbravo, Odoo) and hybrid automation using N8N. Experienced in the full development lifecycle, from PostgreSQL database architecture to Docker container deployment.

Work Experience

- Mar 2025 – Mar 2026

Software Developer (Junior), Sidesoft CIA. LTDA – Quito
 - Developed and implemented backend customizations for ERP ecosystems (Openbravo and Odoo) using Java and Python.
 - Designed automated workflows with No-Code tools (N8N) for API integrations, reducing operational overhead.
 - Performed corrective maintenance and optimized SQL queries in PostgreSQL to improve enterprise module performance.
- Aug 2024 – Sep 2024

Software Development Intern, Secretaría Técnica Inmobiliar – Quito
 - Participated in the web application development lifecycle under the Java EE standard for internal affairs management.
 - Executed application maintenance, migrating visual components and refactoring Java code to improve stability and scalability.
 - Designed and managed relational database schemas, ensuring data integrity for critical institutional information.

Projects

- Aug 2025 – Sep 2025

Metabase Analytics Integration in Openbravo

An executable application to integrate charts into the ERP

 - Developed a Java middleware solution to embed Metabase dashboards directly within the Openbravo ERP interface via API.
- Sep 2025 – Oct 2025

ERP Workflow Automation with N8N
 - Orchestrated webhooks and automated triggers to implement data manipulation processes interacting between Openbravo and external services, eliminating manual data entry.
- Aug 2024 – Sep 2024

Web Application Management for Java EE
 - Developed web applications for internal access within the institution.
 - Migrated application components to modern versions.
 - Maintained code to improve security, efficiency, and scalability.
- Mar 2023 – May 2023

Clinical Management System for Optometry
 - Developed a full-stack desktop application (CRUD) using Java Swing and PostgreSQL for medical records digitalization.
 - Implemented an automated reporting module to generate and export clinical histories and prescriptions to PDF format.

Skills

Backend & Languages: Java (Java EE), Python, SQL (PostgreSQL), Bash

ERP & Frameworks: Openbravo, Odoo, Django

DevOps & Tools: Docker, Git/GitHub, N8N (Automation), Metabase, Linux

Languages: Spanish (Native), English (B1)

Education

Sep 2021 – Sep 2025 **Universidad Politécnica Salesiana**, in Computer Science Engineering – Quito, EC
